

# SkillVine

-An online platform for managing, evaluating grading activity points.

## Abstract

Our web-based Activity Points Management System is a much-needed solution that simplifies and enhances the way student certificates for activity points allocation are handled. The system integrates and automates the existing process of uploading, evaluating and awarding certificates. It saves time and resources for both students and teachers by eliminating paper-based certification and manual verification procedures. The system also verifies the authenticity of certificates and provides feedback on their validity and maximum points each certificate deserves to the concerned teacher. These features improve the quality and reliability of the certification process.

Furthermore, our solution offers students a unified platform for storing and organising their certificates in an online portal, improving their productivity and accuracy. It increases student engagement and motivation by providing them with instant feedback and recognition for their achievements. Our system is designed to be user-friendly, secure and scalable. It can be accessed from any device with an internet connection. Our system aims to provide a convenient, efficient and transparent way of managing student activity points.
