PROJECT GUIDE

Asst. Prof. Aswathy B

PROJECT DESCRIPTION

- The project we propose is an Activity Points Management System that allows students to upload certificates for evaluation and at the same time, teachers to examine and assign points to them.

- The system we use will also validate certificates and provide feedback to teachers on their credibility.

- The system will provide a unified platform for students to manage their certificates and being updated about their statuses, making the certification process more efficient and transparent.

Problem Statement

For both students and teachers, the existing process of managing and verifying certificates and activity points is laborious and time-consuming. Our project intends to make the certification process a lot more efficient and transparent by developing a reliable and user-friendly system that automates it and also can assist in validation and the assigning points procedures.

MOTIVATION/ SCOPE

TEACHERS' BENEFITS

It would make teachers' lives significantly easier by contributing in making the current method more systematic and organised through the use of an automated system.It reduces teachers' workload by a great extent.

01

STUDENTS' BENEFITS

Students will no longer need to search extensively and face difficulties in uploading their certificates to a Drive folder, and then manually adding all the required information to a Spreadsheet.

02

REAL TIME TRACKING

Students can know at at time the number of activity points they've got, real time.

03

Thank you!
